ELECTROLYSIS

A safe and effective method of permanent hair removal. It is a proven method of permanent hair removal. The treatment is approved by the medical profession and has been available for over 100 years. Electrolysis involves the insertion of the sterile disposable fine probe into the hair follicle to the hairs root, a mild current is then passed down the needle to the tip to cauterise the hair root enabling the hair to be withdrawn. If this is successful the blood supply to the hair is cut off and the hair has no form of nutrition. Growth is retarded.
